

# TRACKER

# SPOT 250

Information specifically for:  
IL-TRACKER250S/1

V1.1

This manual contains important information.  
Please read before operating fixture.

© 2005 Techni-Lux Inc.

# **IMPORTANT INFORMATION**

**Save original packing and documentation for warranty, service and return issues.**

Limited Warranty: This warranty covers defects or malfunctions in this equipment. This warranty lasts for a period of one year from date of purchase. It is the owner's responsibility to provide invoices for proof of purchase, purchase date and dealer or distributor. If purchase date can not be provided, warranty period will start at manufacture date. It is the sole discretion of Techni-Lux to repair or replace parts or equipment. All shipping will be paid by purchaser. This warranty does not cover lamps, fuses, belts, power semiconductors, relays, cleaning, standard maintenance adjustments or normal wear items or any problem resulting from the following: improper wiring, incorrect voltage (including low or over voltage conditions and lightning), abuse, misuse, improper maintenance or an act of God or damage resulting from shipping. Warranty will be null and void if the product is altered, modified, misused, damaged, or subjected to unauthorized repairs. Lamps are covered by relevant manufacturer warranty. This warranty gives you specific legal rights, and you may also have other rights which vary from state to state. Any liability for consequential and incidental damages is expressly disclaimed. No other warranty, expressed or implied is made. Techni-Lux liability in all events is limited to, and shall not exceed, the purchase price paid.

Returning equipment and Repairs: All returns must be accompanied by a Return Merchandise Authorization (RMA) number and sent pre-paid. Contact the dealer or Techni-Lux directly to obtain an RMA. The RMA number must be clearly listed on the shipping label. Due care must be exercised in packing all merchandise to be returned. All repairs must be accompanied by a written explanation of the claimed problem or error encountered. Techni-Lux is solely responsible for determining a product's eligibility for coverage under warranty. If returning for consideration of credit, all accessories and documentation, original protective material and cartons must be included and the equipment, packing and carton must be in new resalable condition. Credit for returned merchandise will be issued at the lowest current price and is subject to a restocking fee of 20%. No returns accepted on discontinued items. Techni-Lux is not responsible for merchandise damaged in transit and reserves the right to refuse any return that is damaged by the carrier, not accompanied by a Return Authorization Number (RMA#) or sent by freight collect.

Claims: All claims must be made within seven (7) days of receipt of merchandise. Any physical damage must be reported to carrier upon receipt of merchandise.

## *Fixture Overview*

- Pan range of movement: 530°
- Tilt range of movement: 280°
- High resolution 16 Bit Pan/Tilt movement for accurate positioning
- Pan/Tilt motor speed
- Consistent & auto correcting Pan/Tilt positioning
- Remote lamp on and off
- Remote reset
- Color wheel with 7 dichroic colors plus open
- Color wheel with continuous rotation for rainbow effect
- Static effect/gobo wheel with 3 gobos & 3 additional dichroic colors plus open
- 3-facet rotating prism, variable speed in both directions
- Gobo wheel with 5 rotating, indexable and interchangeable gobos plus open
- Gobo wheel with continuous rotation
- Remote selection of zoom degrees: 15°, 18°, 21°, 24°, 26°
- Frost and UV blacklight effect
- Motorized focus
- Variable shutter for strobing effects and quick blackouts
- Motorized dimmer from 0 to 100%
- Control via DMX512 using 3 pin In/Out XLRs
- Uses 16 Channels of DMX
- Digital display for DMX addressing and fixture settings
- Ventilation via forced air
- Anti-reflective coated glass optics
- High efficiency coated glass Spherical Reflector
- Lamp: CSD250/2 or MSD250/2
- Luminous output: 18,000 Lux

## *Physical*

Color	Black
Width	17 in (43.2cm)
Depth	17 in (43.2cm)
Height	21 in (53.3 cm)
Weight	61 lbs (27.7 kg)
Gross Weight	73 lbs (33.1 kg)

## *Lamp Source*

Lamp Type	250w Metal Halide Discharge
Base	GY9.5
Lamps	GE – CSD250/2 or Phillips – MSD250/2
Lamp Specs	250w, 3000 Hour, 8500°K Color Temp, 18000 Lumens
Ballast Type	Magnetic

## *Environmental*

Maximum ambient temperature	105°F (40°C)
Maximum exterior surface temperature	176°F (80°C)
Minimum distance to flammable surface	3.3ft (1m)
Minimum distance to illuminated surface	4ft (1.2m)

## *Electrical*

Factory Setting	115v 60Hz
Selectable Voltages	100v / 115v / 208v / 220v @ 50 or 60Hz
Rated Power	500W, 4.1A @ 115v
Fuses	6.3A Time Delay (Slow) Size: 1¼" x ¼"

## *Control*

Protocol	USITT DMX512 (1990)
Channels	16
Pan / Tilt Resolution	16 bit
Data I/O	3 Pin XLR (Cannon)
Modes	Master / Slave / DMX

## *Optics*

Reflector	High efficiency coated glass Spherical.
Lenses	Anti-reflective coated condenser system.
Zoom	Stepped: 15°, 18°, 21°, 24°, 26°

## *Gobo Size*

Gobo Rotating	Outside Diameter	1.465" (37.2mm)
	Image Diameter	1.181" (30mm)
	Thickness Max	0.138" (3.5mm)
Gobo Fixed	Outside Diameter	1.465" (37.2mm)
	Image Diameter	1.181" (30mm)
	Thickness Max	0.047" (1.2mm)

## *Rigging*

Position	Floor or Truss mount
Orientation	Any
Mounting Points	2
Clamp Orientation	Bracket: 0°, 90° Clamp: Any angle
Safety Point	Eye Bolt

# Unit Parts

- 1 - Moving Head
- 2 - Yoke
- 3 - Carry Handles
- 4 - Base

- Rear Panel
- 5 - Power Switch
- 6 - DMX Out
- 7 - DMX In
- 8 - Power Cord
- 9 - Fuse Holder

- Front Panel
- 10 - Mode Button
- 11 - Enter Button
- 12 - Up Button
- 13 - Down Button
- 14 - Display

# Unpacking

Immediately upon receipt, carefully unpack and inspect the fixture to verify that all parts are present and have been received in good condition. If any parts appear damaged from shipping or the shipping carton shows signs of mishandling, retain all packing material for inspection and notify the shipper immediately. Save all original packing and carton. In the event that the merchandise is to be returned, the original carton and packing must be used. The customer will be billed for a new carton and packing if merchandise is received without the original carton and packing. The plastic bag shipped with the fixture can be used to keep the fixture clean if stored or installed in a temporarily dusty environment. Do not operate fixture with plastic bag in place.

## *Save Shipping Materials*

The packing and carton are designed to provide the fixture with protection during shipping. Save original packing and documentation for warranty, service and return issues. Additional charges will be applied to return items not received in original or incomplete packing.

## *Claims*

Physical damage must be reported to the Freight Carrier or Shipping Company upon receipt of merchandise. Damage incurred in shipping is the responsibility of the Freight Carrier or Shipping Company. It is the customer's obligation in the event that merchandise is received damaged caused by shipping to notify the Freight Carrier or Shipping Company immediately. All other claims not related to damage incurred during shipping must be made to the Dealer or Distributor within 7 (seven) days of receiving merchandise.

## *Returns*

Returned merchandise must be sent prepaid, in the original packing with a Return Merchandise Authorization number (RMA) clearly listed on the shipping label. Items sent by Freight Collect or without a RMA number will be refused. Call your sales person and request a RMA prior to shipping. Be prepared to provide the model number, serial number and a brief description of the nature of the return. Shipping damage resulting from inadequate packaging is the customer's responsibility. Customer will be charged additional shipping charges to return products received in non original packing and or cartons.

## Power

Do not apply power to the fixture until input voltage setting and power source are verified. For protection against electric shock, fixture must be connected to suitable earth ground. Make sure fixture is cool and disconnected from power mains before any service.

The listed current rating is its average current draw under normal conditions. All fixtures must be powered directly from a switched circuit. This fixture cannot be run on a rheostat or dimmer circuit even if used solely for a 0% to 100% switching. Before applying power to a fixture, check that the fixture's input voltage matches the power source voltage. Consult a qualified electrician if there are any concerns about proper connection to power.

Cable (EU)	Cable (US)	Pin	International
Brown	Black	Live	L
Light blue	White	Neutral	N
Yellow/Green	Green	Earth	⊕

## Voltage Selection

Make sure fixture is cool and disconnected from power mains before any service.

This fixture ships from the factory set for 115v 60Hz operation unless otherwise specified or marked. Before accessing the Transformer Connection, make sure fixture is cool and physically disconnected from power mains. Remove the metal cover that extends across the base from the Power Input to the Display. It is held by 9 Phillips screws. One connection must be moved to adjust input voltage and one to adjust Line Frequency.

# Lamp

Make sure fixture is cool and disconnected from power mains before any service.  
Do not touch the lamp glass with bare fingers. Wear eye protection when handling lamp.

When operating, always allow the lamp to cool at least 5 minutes before attempting to re-strike the lamp. Not doing so can cause damage to the fixture and lamp. This fixture uses a 250w Metal Halide Discharge lamp. Either a CSD250/2 from GE or a MSD250/2 from Phillips can be fitted. Both lamps have an average rated life of 3000 hours. The lamp manufacturer determines the rated lamp life under specific test conditions. Factors such as the number of strikes, lamp orientation, line voltage and lamp temperature all affect the actual number of hours a lamp will operate. Lamp temperature is the most controllable and with routine cleaning and maintenance, can be kept in the optimal range to allow the maximum possible life. As Discharge lamps age, the glass envelope becomes weaker increasing the chance of failure due to the high internal pressures. Rupture could result in damage to the fixture and/or injure people nearby. Lamp manufacturers state operating a lamp beyond its rated number of hours constitutes a considerable risk for lamp rupture. Lamp manufacturers recommend lamps be replaced once the rated life of a lamp has been reached.

## *Lamp Installation*

1. Physically disconnect fixture from power mains.
2. Locate the Top Cover, loosen the 3 Fastening Screws and remove.
3. Locate the Lamp Cover, loosen the 2 Fastening Screws and remove. Do not proceed until cover is cool.
4. Remove old lamp (if installed). Never handle lamps with bare hands. Dispose of lamp properly.
5. Insert new lamp into socket. Ensure lamp is firmly and properly seated.
6. Visually align lamp, see Lamp Alignment, before replacing covers.
7. Carefully replace Lamp Cover (2 screws) and Top Cover (3 screws).

**Do not operate Fixture without covers!**

## Lamp Alignment

Due to slight variations between lamps it may be necessary to perform fine adjustments to remove excessively dark or bright spots in the output field. The lamp holder is aligned at the factory, large adjustments to the alignment will not be necessary. Excessively bright spots can damage optical components.

1. Disconnect fixture from power and make certain lamp is cool.
2. Remove both the Top and Lamp covers (see Lamp Installation).
3. Turn Screw A located on the back plate of the Head, visually center the lamp between the condenser lens and the reflector. Optimum distance between the lamp and the condenser lens is 0.04"-0.06" (3/64"-1/16" or 1mm-1.5mm)
4. Turn Screw B, visually center the lamp horizontally to the lens.
5. After visually centering the lamp, replace both the Lamp and Top covers.
6. Apply power to the fixture. CAUTION: Double check for Lamp cover is installation.
7. Using a controller, strike the lamp with shutter and dimmer to 100% and project an open white beam on a flat neutral colored surface.
8. Use Slight adjustment of **Screw B ONLY to optimize the hot spot of the beam.**
9. Extreme caution must be utilized when adjusting Screw A. The lamp must not come to rest against either the front lens or reflector. If the edges of the beam are brighter than the center, the lamp is too close to the reflector. If the center of the beam is much brighter than the edges, the lamp is too close to the condenser lens. Again, the lamp must not come to rest against either the front lens or reflector.

# Mounting

Always consult a qualified professional when rigging. This fixture may be placed on any flat surface or truss that is capable of safely supporting the weight. When selecting a mounting position, take into consideration access for routine maintenance. This fixture may be mounted in any position provided there is adequate room for movement and ventilation. Mount the fixture securely using two mounting clamps and a safety cable. An Eye Bolt is provided for safety attachment. Safety cables must always be attached to the fixture. Do not use handles as secondary mounting points. Do not mount in a place where the fixture will be exposed to rain, high humidity, extreme temperature changes or restricted ventilation. Do not obstruct the vents or fans. Keep fixture a minimum of 3.3ft (1m) from flammable materials.

# Data Link DMX-512

For data, this fixture uses 3 pin XLR (Cannon) type connectors and shielded twisted pair cable approved for EIA-422/EIA485 use. Fixtures are connected in Daisy Chain topography with only one data source and no branching is allowed. Systems using 5 pin DMX interfaces can be accommodated by purchasing 3-to-5 pin adapters or building adapter cables.

## Data Terminator

A Data Terminator can be connected to the DATA OUT connection of the last fixture to reduce the effects of noise in the signal; it is not required for all installations. To make a Data Terminator, connect a 120-ohm ¼ watt resistor across pin 2, Data Negative (S-) and pin 3, Data positive (S+). A qualified technician can determine if a Data Terminator is needed.

## Adapter 5-to-3 pin

Numbers designating each pin can be found on connectors. Converting between the two XLR types is done in a pin-to-pin fashion. Connect the shields to pin 1, then connect pin 2 to pin 2 and pin 3 to pin 3. This is true for converting either 5 to 3 pin or 3 to 5 pin regardless of either connector's gender. Pins 4 and 5 are not used on the 5 pin XLR connectors.

# Control Panel Menu

Use the fixture's Control Panel to access the Control Menu. The MODE Key moves between options, UP/DOWN selects the Action of the option and ENTER confirms the selection. Settings are stored and recalled on subsequent power cycles.

Mode	Function	Action
<i>PAN</i>	Pan movement direction Invert	NO = Not Inverted YES = Inverted
<i>TILT</i>	Tilt movement direction Invert	NO = Not Inverted YES = Inverted
<i>Addr</i>	DMX Start Address	Selectable 1 to 496
<i>rEST</i>	Fixture Reset	NO = Default YES = Initiate Reset
<i>COLI</i>	Color Wheel Movement Mode	NO = Linear YES = Indexed
<i>FUN</i>	Operating Mode	<i>dM512</i> DMX512 mode
		<i>PrE</i> Automatic
		<i>SLRE</i> Slave mode
<i>LAMP</i>	Lamp ON/OFF	NO = Lamp OFF YES = Lamp ON
<i>VER</i>	Software Version	View Software Version
<i>HEAT</i>	Error: Lamp didn't strike, Hot	See Troubleshooting
<i>LAER</i>	Error: Lamp didn't strike, Service	See Troubleshooting

## Start Address

The Start Address of a fixture is set using the “Addr” mode in the Control Panel Menu. Consult the manual of the system’s DMX512 controller to select a desirable addressing scheme before addressing fixtures. Each fixture connected to the DMX-512 data link requires a Start Address to indicate the first DMX channel containing data designated for that fixture, see DMX-512 Background. Valid Start Addresses range from 1 to 512. Fixtures requiring more than one channel for control will read subsequent channels up to the total number of channels required. A fixture requiring five (5) channels of DMX, set to a Start Address of eleven (11), would read data from channels: 11 and 12, 13, 14, 15. The next logical Start Address would be channel 16. Because all fixtures see the same data, fixtures may be set to any address without concern to order in the DMX-512 chain or physical location. Choose a Start Address so the channels used do not overlap with other fixtures. In some cases, it may be desirable to set two or more same type fixtures to the same Start Address. In this case, the fixtures will be slaved together and respond to the same data.

*Example Select Start Addresses for 4 fixtures each requiring 16 channels of DMX.*

Since these are the first fixtures added to the system, the first unit will be set to Start Address=1. This fixture occupies DMX channels 1 thru 16. The next DMX channel available for a Start Address is found by adding the previous fixture’s Start Address to its channel requirement: 1+16=17. DMX channel 17 is the next available Start Address. In this example, to maximize channel usage no empty channels are left between fixtures so the second Start Address is set to DMX channel 17. The second fixture occupies DMX channels 17 thru 32. Repeat the process for the remaining two fixtures: 17+16=33 and 33+16=49. Therefore, the four 16 channel fixtures have Start Addresses of 1, 17, 33 and 49. Repeat the technique once more for the next free channel in the system, 49+16=65. Channels 65 thru 512 are available for expansion of the system.

# DMX-512 Channels

The Tracker 250 Spot requires 16 channels of DMX.

<b>Channel</b>	<b>Function</b>
1	Pan Coarse Movement
2	Pan Fine Movement
3	Tilt Coarse Movement
4	Tilt Fine Movement
5	Movement Speed Pan/Tilt
6	Control Reset/Lamp
7	Color Wheel
8	Fixed Gobo Wheel
9	Prism
10	Prism Rotation
11	Rotating Gobo Wheel
12	Gobo Rotation & Index
13	Effects – Zoom Frost UV
14	Focus
15	Shutter
16	Dimmer

## *CH 1-4 : Pan / Tilt Movement*

The Pan and Tilt motors use a position feedback system. If the position of either is disturbed, the fixture will correct automatically. The Pan and Tilt Menu Modes can be used to alter the default direction of movement. Movement speed is either automatically determined by the fixture or manually set using Channel 5 Pan/Tilt Movement Speed. Pan range is 530° of movement. Tilt range is 280° of movement.

<b>CH 1 – Pan Coarse Movement (530°)</b>	
<b>CH 2 – Pan Fine Movement</b>	
<b>CH 3 – Tilt Coarse Movement (280°)</b>	
<b>CH 4 – Tilt Fine Movement</b>	
<b>DMX Value</b>	<b>Function</b>
0 – 255	Movement - Minimum to Maximum

## *CH 5 : Movement Speed Pan/Tilt*

When set to zero (0) the fixture automatically determines the Pan/Tilt speed. Other values are used to set the movement speed manually.

<b>CH 5 – Movement Speed Pan/Tilt</b>	
<b>DMX Value</b>	<b>Function</b>
0	Auto Speed
1-255	Fixed Speed - Fast to Slow

## *CH 6 : Control Reset/Lamp*

Fixture reset and Lamp On/Off control is accessed from a single channel. The “No Function” values provide buffer zones between functions and are not values to which the channel should be set. In the case of noisy faders or unintentional movement, the buffers will prevent slight variations in value to toggle Lamp states or start a fixture Reset.

<b>CH 6 – Control Reset/Lamp</b>	
<b><i>DMX Value</i></b>	<b><i>Function</i></b>
0-127	No Function
128-139	RESET then Lamp ON (3 second delay)
140-229	No Function
230-239	Lamp OFF (3 second delay)
240-255	No Function

## *CH 7 : Color Wheel*

The Color Wheel holds 7 solid colors plus open. These color filters can be used in conjunction with the Dichroic Rotating Gobos and Fixed Gobo color filters to create many color combinations. A Rainbow Color Scroll effect can also be created. In the Control Panel Menu, the COL1 option will change the behavior of the Color Wheel from Indexed to Linear. In Linear mode, the fixed color indexes are removed and colors can be positioned variably.

<b>CH 7 – Color Wheel</b>	
<b><i>DMX Value</i></b>	<b><i>Function</i></b>
0-7	Open
8-15	Open / Red
16-23	Red
24-31	Red / Yellow
32-39	Yellow
40-47	Yellow / Magenta
48-55	Magenta
56-63	Magenta / Green
64-71	Green
72-79	Green / Orange
80-87	Orange
88-95	Orange / Blue
96-103	Blue
104-111	Blue / Pink
112-119	Pink
120-127	Pink / Open
128-137	Color Scroll Pause
138-255	Rainbow Color Scroll – Slow to Fast

## CH 8 : Fixed Gobo Wheel

The Fixed Gobo Wheel contains 3 fixed gobos and three color filters. Using both Gobo wheels and varying the Focus can create many interesting effects. Each gobo is mounted in a frame that can easily be removed. Gobos can easily be rearranged from the factory default arrangement shown. For more information, see **Installing Gobos**.

CH 8 – Fixed Gobo Wheel	
DMX Value	Function
0-36	Open
37-73	Fixed Gobo 1
74-110	Fixed Gobo 2
111-147	Fixed Gobo 3
148-184	Color Filter Lt. Orange
185-221	Color Filter Lt. Purple
222-255	Color Filter Lt. Blue

## CH 9 : Prism

The Prism effect uses a 3 facet prism to create multiple beams. Using channel 10, the effect can be rotated in either direction at variable speeds.

CH 9 – Prism	
DMX Value	Function
0-127	Open
128-255	Prism

## CH 10 : Prism Rotation

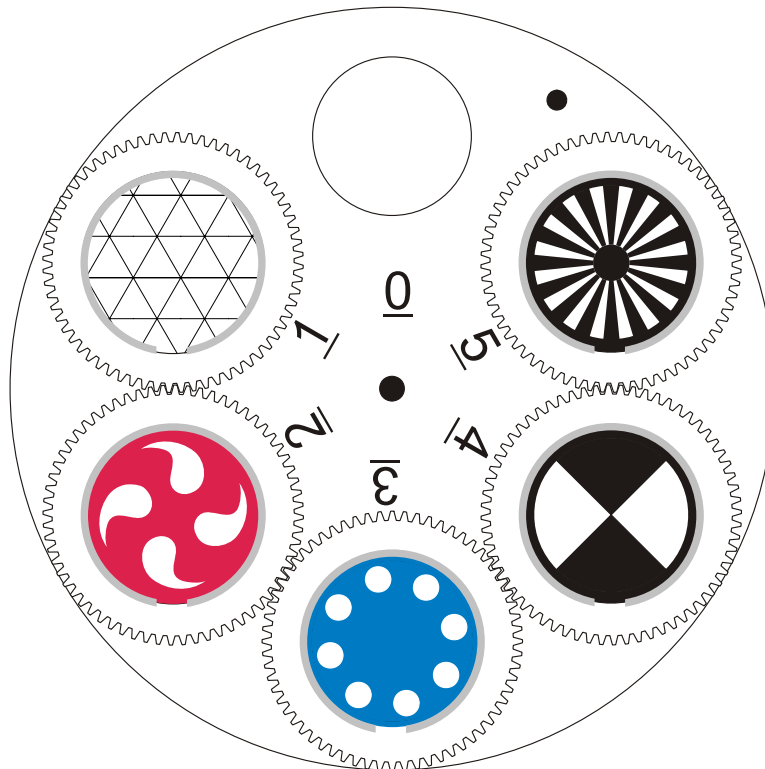

Controls the rotation of the Prism.

CH 10 – Prism Rotation	
DMX Value	Function
0-4	Prism Rotation Stop
5-127	Prism Rotation Forward – Slow to Fast
128-132	Prism Rotation Stop
133-255	Prism Rotation Reverse – Slow to Fast

## CH 11 : Rotating Gobo Wheel

The Rotating Gobo Wheel contains 5 replaceable gobos, 2 metal and 3 glass. The Gobo Rotation & Index channel 12 controls the position and rotation of the gobos. Using both Gobo wheels and varying the Focus can create many interesting effects.

CH 11 – Rotating Gobo Wheel	
DMX Value	Function
0-31	Open
32-63	Rotating Gobo 1 (Glass – Waffle Texture)
64-95	Rotating Gobo 2 (Glass – Pink Pin Wheel)
96-127	Rotating Gobo 3 (Glass – Blue Field White Dots)
128-159	Rotating Gobo 4 (Metal)
160-223	Rotating Gobo 5 (Metal)
224-228	Gobo Scroll Pause
229-255	Rotating Gobo Scroll – Slow to Fast

## CH 12 : Gobo Rotation and Index

Rotating gobos can be rotated in either direction or indexed to a fixed orientation.

<b>CH 12 – Gobo Rotation and Index</b>	
<b>DMX Value</b>	<b>Function</b>
0-60	Indexed – 0 to 540°
61-158	Rotation – Slow to Fast
159-255	Rotation Reverse – Slow to Fast

## CH 13 : Effects – Zoom Frost UV

The 5 step zoom feature of this fixture has two modes. The Focus Correction mode will make adjustments to help keep the image in focus when changing beam angles. The No Focus Correction mode will not adjust the focus when changing beam angles. The standard projection from this fixture is a hard edge beam. Modification of the beam can be done with a Frost Effect, creating a very wide diffused beam with a soft edge. A UV color filter effect is also included.

<b>CH 13 – Effects – Zoom Frost UV</b>	
<b>DMX Value</b>	<b>Function</b>
0-31	15° Beam Angle – No Focus Correction
32-47	18° Beam Angle – No Focus Correction
48-63	21° Beam Angle – No Focus Correction
64-79	24° Beam Angle – No Focus Correction
80-95	26° Beam Angle – No Focus Correction
96-111	15° w/ Frost
112-127	15° w/ UV Color Filter
128-159	15° Beam Angle – Focus Correction
160-175	18° Beam Angle – Focus Correction
176-191	21° Beam Angle – Focus Correction
192-207	24° Beam Angle – Focus Correction
208-223	26° Beam Angle – Focus Correction
224-239	15° w/ Frost
240-255	15° w/ UV Color Filter

## CH 14 : Focus

The Focus is used to vary the focal point of the projection. Using both Gobo wheels and varying the Focus can create many interesting effects.

<b>CH 14 – Focus</b>	
<b>DMX Value</b>	<b>Function</b>
0-255	Focus – Far to Near

## *CH 15 : Shutter*

The Shutter functions in three modes. Standard Strobe Effect where the shutter Opens/Closes at a fixed rate. Pulse Strobe Effect where the Open and Close speeds are different. Random Strobe Effect runs the shutter at irregular intervals.

<b>CH 15 – Shutter</b>	
<b><i>DMX Value</i></b>	<b><i>Function</i></b>
0-31	Closed (Black Out)
32-63	Open
64-95	Strobe Effect - Slow to Fast
96-127	Open
128-159	Pulse Strobe Effect - Slow to Fast
160-191	Open
192-223	Random Strobe Effect
224-255	Open

## *CH 16 : Dimmer*

The dimmer is used to vary the intensity of the beam from full open to dark.

<b>CH 16 – Dimmer</b>	
<b><i>DMX Value</i></b>	<b><i>Function</i></b>
0-255	Intensity - Dark to Full Open

# Photometric Charts

# Installing Gobos

Make sure fixture is cool and disconnected from power mains before any service.  
Do not touch gobos with bare fingers.

Care must be used when removing and replacing individual rotating gobos. Take precautions not to scratch or damage either the glass or metal gobos. The use of cotton gloves will keep finger prints off of gobos.

## *Installing Rotating Gobos*

1. Remove fixtures Top cover to gain access to the Rotating Gobo Wheel.
2. Physically rotate the wheel to locate the desired gobo.
3. Locate the Retaining Clip that secures the gobo in the rotating bearing. Use a Retaining Clip puller, dental pic or small screw driver to pull the clip out of the bearing. Be careful not to scratch gobos when removing the clip.
4. Carefully remove the Retaining Clip and gobo.
5. Place the new gobo in the bearing. If the gobo is a textured effect, install the smooth side toward the lamp. If the gobo is a dichroic (glass litho), install with the coated side away from the lamp. To find the coated side, place a pointed object such as a small screw driver or pen against one side of the gobo. View at an angle such that the reflection of the pointed object can be seen on the surface of the gobo. The reflection will appear to meet the object on the coated side (place toward lamp) and on the uncoated side there will appear to be a slight gap between the reflection and the object.
6. Replace Retaining Clip making sure it is securely seated in the bearing against the gobo. Be careful not to scratch gobos when reinstalling the clip.
7. Clean finger prints from the gobo using a soft lint free cloth or tissue and either Isopropyl or Denatured Alcohol.

## Installing Fixed Gobos

1. Remove fixtures Top cover to gain access to the Fixed Gobo Wheel.
2. Physically rotate the wheel to locate the desired gobo.
3. Gently push the Gobo Holder forward to release from the wheel then pull the holder out of the wheel. Fixed Gobo positions can easily be swapped.
4. To reinsert the Gobo Holder: Slide the gobo holder under the Retaining Clip and press into place. Make certain that the Gobo Holder seats flat into the Fixed Gobo Wheel.
5. To change the Gobo: With the Gobo Holder out of the fixture, remove the 3 screws that clamp the gobo into the holder. If the gobo is a textured effect, install the smooth side toward the lamp. If the gobo is a dichroic (glass litho), install with the coated side away from the lamp. To find the coated side, place a pointed object such as a small screw driver or pen against one side of the gobo. View at an angle such that the reflection of the pointed object can be seen on the surface of the gobo. The reflection will appear to meet the object on the coated side (place toward lamp) and on the uncoated side there will appear to be a slight gap between the reflection and the object.
6. Reassemble the gobo holder with the 3 screws. Be careful not to scratch the gobo.
7. Clean finger prints from the gobo using a soft lint free cloth or tissue and either Isopropyl or Denatured Alcohol.

# DMX-512 Background

DMX-512 is a digital data transmission standard developed by the United States Institute for Theater Technology (USITT). It is designed to enable control of lighting equipment, originally dimmers. DMX deals solely with the formatting of data for transmission and does not dictate how the data is created or used.

Under DMX, signals are transmitted in much the same way a computer modem transmits data. The Data, divided in to channels, is "Framed" using a start bit, high (1), eight data bits and finally, two stop bits, both high (1). DMX uses no parity to check the integrity of the signal. Instead, DMX relies on the ultra low probability of an error occurring in the same place when the data is resent. The rate at which data is sent is fixed at 250k bps, almost four and a half times faster than a 56k modem. This speed allows all data on a DMX chain to be updated more than 44 times every second.

The transmitted data follows a specific format. DMX allows for 512 channels each with eight data bits, giving each channel the possibility of 256 values. When a data "Packet" is sent, all channels are transmitted one after another. Even if the data on a specific channel has not been changed, it must be sent. In a packet, a "start code" of all zeros is sent before the data to identify the signal as a Standard DMX transmission. This start code is transparent to the user and is handled by the controller.

The physical signals are transmitted using a twisted pair of wires and a common shield, a configuration called Balanced. The controller and all receiving equipment are connected using a "Daisy Chain" connection. The signal is jumped from the controller to a piece of DMX equipment. From there, the signal is jumped to the next piece of equipment and so on until the last piece of equipment is connected. No branches are allowed and the signal does not come back to the controller. The final piece of equipment will have only one cable connection. As a result, all equipment connected to the chain will see exactly the same signal whether it is first or last. When connecting equipment, no particular attention needs to be paid to the order in which the equipment is connected. Depending on the conditions and equipment, a line terminator may be required. If there is any question, in most circumstances the addition of a terminator will not degrade the signal. To make a terminator, add a 120-ohm resistor between the Signal Data Negative and Signal Data Positive pins of a connector in the last piece of equipment in the chain.

The DMX Standard calls for connections between DMX compatible equipment to be made using 5 pin XLR connectors. However, it is common to see fixtures with 3 pin XLR connectors as these types of balanced or "Lo-Z" cables are common in the audio industry. In either case, pin numbers are the same and carry the same signals.

Pin 1	-	Signal Common (Shield)
Pin 2	-	Signal Data Negative
Pin 3	-	Signal Data Positive
Pin 4	-	(not used)
Pin 5	-	(not used)

# Maintenance

Make sure fixture is cool and disconnected from power mains before any service.  
Do not touch the lamp glass with bare fingers. Wear eye protection when handling lamp

Weekly operating hours and environmental conditions will establish how often the fixtures need cleaning. Fixtures should be cleaned and inspected at least once a month to maintain optimum performance. Accumulation of dust and fog residue increases heat build up, can lead to malfunctions, overheating and reduction in maximum light output. This condition may cause undue stress on electronics, mechanical elements, reduce lamp life, fixture life and over all performance. Before conducting any maintenance, disconnect fixture from power mains.

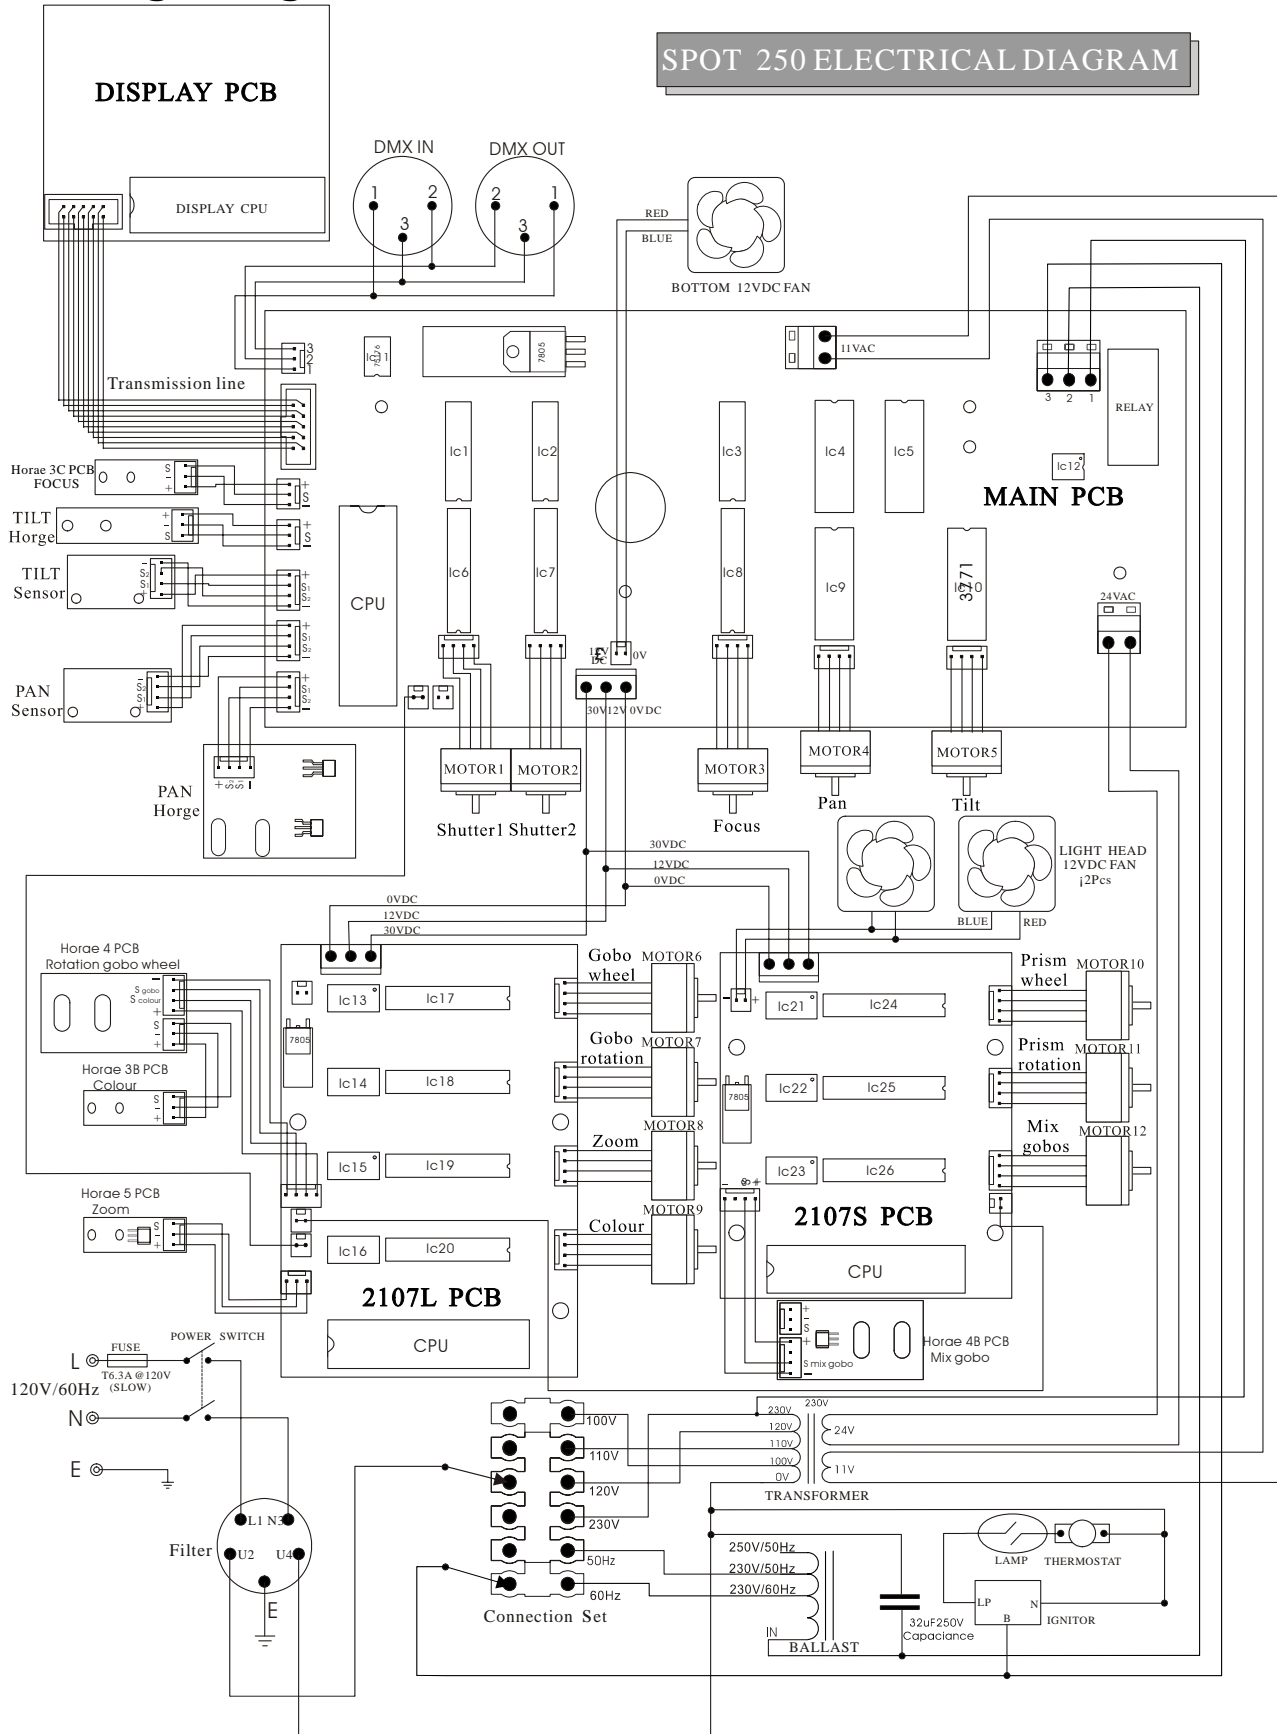

- 1) Disconnect fixture from power mains.
- 2) Use a vacuum with a soft brush to remove dust collected on external vents and internal components. If using an air compressor, use low pressures and extreme care to prevent damaging any internal parts or effects.
- 3) Vacuum dust buildup from fan intakes and check that all fans function correctly.
- 4) Clean all optical elements when the fixture is cold. Use a soft lint free cotton cloth or tissue and either Isopropyl or Denatured Alcohol. Any cleaner approved for coated eyeglass lenses will also work.
- 5) Inspect clamps and safety cables to ensure fixture is secure and safe.

# Troubleshooting

Symptom	Possible Cause / Solution
No Power	Check for power on mains
	Check power switch
	Check main fuse and fuse holder
No response to DMX	Check data cables
	Check Start Address
	Check that fixture isn't in the Demo mode
Incorrectly responds to DMX  (Diagnostic technique for DMX issues: Set suspect fixture's Start Address the same as a correctly functioning fixture. If both units then function correctly, issue is programming)	Check Start Address
	Check for overlapping addresses
	Check fixture set up (Pan/Tilt Invert...)
	Check Data cables (faults and proper wiring)
No Lamp Power	Bad or end of life lamp
	Check DMX value for Control/Reset Lamp Channel
	Inspect fixture light path and verify no effects are blocking beam
	Remove from DMX and check to see if lamp can be struck from Control Panel
	Over temperature error – Turn Lamp off and allow fixture to cool then attempt to restrike the lamp. If this is the case, check all fans.
Erratic operation	See "Incorrectly responds to DMX"
	Check for properly wired DMX cables
	Check for broken wires inside unit
	Check for damaged Data transceiver IC.
An effect wheel doesn't go to correct position	Check sensor and magnet
	Check belts (if applicable)
	Check motor with no power, should be able to move easily.

# Wiring Diagram

## SPOT 250 ELECTRICAL DIAGRAM

## Accessory Items

Order Code	Description
LCSD250/2-G	Replacement Lamp GE CSD250/2, 250w, 3000 Hours, 8500°K
LMSD250/2-P	Replacement Lamp Phillips MSD250/2, 250w, 3000 Hours, 8500°K
CLAMP-MEGA/B	Clamp-Mega Black - Heavy Duty
CLAMP-CBHALF	Coupler Half Cheeseborough
SAFETYCABLE1	Safety Cable Silver 30"
SAFETYCABLE2	Safety Cable Black 30"
SAFETYCABLE3	Safety Cable Black 18"
SAFETYCABLE4	Safety Cable Silver 18"
CA-XLR3/1	Pre-made 1' 3-pin XLR Cable
CA-XLR3/5	Pre-made 5' 3-pin XLR Cable
CA-XLR3/10	Pre-made 10' 3-pin XLR Cable
CA-XLR3/20	Pre-made 20' 3-pin XLR Cable
CA-XLR3/50	Pre-made 50' 3-pin XLR Cable
CA-XLR3/100	Pre-made 100' 3-pin XLR Cable
CO-XLR3M	XLR Connector 3-pin Male
CO-XLR3F	XLR Connector 3-pin Female
CO-XLR5M	XLR Connector 5-pin Male
CO-XLR5F	XLR Connector 5-pin Female
CO-XLRTERM3	XLR 3 Pin Data Terminator
CO-XLR3MTO5F	XLR 3 Pin Male to 5 Pin Female Adapter
CO-XLR5MTO3F	XLR 5 Pin Male to 3 Pin Female Adapter
